

# CATALOGUE

## 2018/2019

# INTRODUCTION

Dear Customers,

We present the new catalogue of the products of our company Bonita Group Service s.r.o., where you will find a comprehensive range of play elements and sets for the construction, restoration or completion of children's playgrounds. At the same time, we would like to thank you for your trust in us demonstrated in the past years.

Last year, we introduced a wide range of workout elements and sets for you. This year, we have prepared a pirate ship that is suitable for 2 year olds!

Street workout is a good opportunity for those who do not enjoy going to the gym and prefer to stay in the fresh air. Street workouts are bodyweight exercises that contribute to improving physical fitness.

More information and detailed descriptions of play elements, ground plans, new products, special promotions etc. can be found on our website at [www.playgrounds-bonita.com](http://www.playgrounds-bonita.com).

Why get a **children's playground** from us?

- Minimal maintenance requirements of our products.
- Versatility and variability of play sets.
- Play elements and sets are made of the finest materials and dimensioned to ensure maximum durability.
- We pay special attention mainly to the safety of children already when designing our play elements.
- High quality workmanship.
- Play sets with lower platforms up to 1 m do not require a costly impact surface (pebbles, rubber, cast rubber, etc.).
- The all-metal play elements are nearly maintenance-free.

The main focus of our company is on reliability, timeliness and the provision of high quality services. Our company reputation is based on honest and respectable dealing with customers. Our concept is quality work at a professional level = a satisfied returning customer.

**We look forward to working with you and believe that you will be happy with our work. Team of Bonita Group Service s.r.o.**

## Play sets

Play sets offer active entertainment to children while developing their basic motor skills. Children's playgrounds can be built in all types of schools, in relaxation zones, recreational complexes, in housing developments, swimming pool complexes and family home backyards. Play sets can be assembled according to the investor's wishes with regard to the size of the space, the age of future users etc.

## Development of children

Children's playgrounds have a major impact on the development of pre-school and school children. They enrich the life of the child, develop his/her motor skills and help establish social contacts not only with the child's peers but also with children of different ages. They have the opportunity to watch and imitate older children or help and guide younger

ones through advice - demonstration.

Children's playgrounds have been an integral part of towns and cities for decades and are used for children's leisure activities.

## Functions of playgrounds

Playgrounds also contribute to the development of physical abilities, such as endurance, effort to overcome obstacles, match up to others, and overcome fears. They improve speed, skill and dexterity, develop a positive relationship to physical activity, and thus building the basis for further sporting development. Equally as important is the building of a healthy confidence, the effort of the child to stand out and show off before others and beat others at something, all that within the physical abilities in the group.

**Children's playgrounds have** a clear positive effect on the young body.

# Material solution of play elements

**The base columns** are made of glued prisms of 100 x 100 mm (the wooden parts are surface treated with deep impregnation and three-layer application of topcoat glazing varnish that meets the conditions of standard EN 71/3 - safe for children's toys) or of structural steel of 100 x 100 x 4 mm (surface treatment against corrosion by galvanising, resulting in a very prolonged service life of the play elements and baked paint KOMAXIT according to a RAL colour tone).

**Slides** are made of red, yellow, green or blue laminate.

**Shaped parts** are milled from fully-coloured extruded polyethylene (HDPE) boards that are resistant to breakage, UV resistant and maintain their rich and bright colours.

**A-shaped roofs** are normally made of waterproof plywood designed for outdoor use or of HDPE on the customer's request.

**The net knots** are made of Polyfix coloured polyamide.

**Multi-strand ropes** with steel core and polypropylene braid with 16 mm in diameter. In blue, red, yellow and green.

**The seat** is normally rubber with steel reinforcement and aluminium structure. The "BABY 1" seat is made of multi-strand ropes with steel core connected with Polyfix connectors. The "BABY 2" seat is made of rubber and contains an aluminium insert. The "Nest" seat frame is steel with a polypropylene rope winding. The inside is made of ropes with pressed-in aluminium endings.

**Pyramidal roofs** are normally made of coloured red laminate.

All play elements are designed with regard to long service life and resistance to vandalism. Requirements for the design in terms of the safety of playground equipment are laid down in European standard EN 1176. All products meet these requirements and their compliance is assessed by an authorised entity TÜV SÜD Czech s.r.o. We attach the appropriate certificate to each supplied play elements..

**Vertical column caps** are steel, zinc coated and painted red.

**Handles, barrier fillers, safety rods, etc.** are galvanised steel and powder paint coated (Komaxit).

**Swing hinges** are robust stainless steel castings fitted with bearings for easy movement. The hinge is multi-directional for the "nest" design.

**The swing posts** are made of steel profiles and hot-dip galvanised.

**The platforms** are normally made of 18mm-thick waterproof plywood designed for outdoor use with anti-slip coating. If required by the customer, they are made of HDPE.

NORMAL

NEST

BABY 1

BABY 2

**The anchor elements** are made of hot-dip galvanised steel.

**The concrete feet** in the pre-drilled holes respect the requirements of the design standard.

## Explanatory notes

### Age limit

The number specifies the minimum age of the child, for which the element was manufactured.

**1,5 m**

### Fall height of up to 1,5 m

Elements marked in this manner required, according to the standard, an impact surface with dampening parameters according to the critical fall height specified.

### Wood

The base columns are made of glued prisms of 100 x 100 mm.

# Construction of play elements

**In addition** to its aesthetic effect, the lawn also has some useful properties related to impact dampening. Experience shows that good maintenance is usually effective for falls from a height of no more than 1 m and can be used without testing.

## Fall height of up to 1 m

Elements marked in this manner also require grass surface as the impact surface.

We offer play sets in two designs depending on the impact damping requirements of the impact surface according to ČSN EN 1177. This standard requires an impact surface with guaranteed damping characteristics, as evidenced by the tests performed, for elements with a fall height greater than 1 m.

In case of play elements with a height up to 1 m, the impact surface may be a lawn.

Elements with a fall height of up to 1 m have a tremendous advantage in that they do not require a costly impact surface made up of loose or synthetic material (e.g. pebbles or rubber), but instead a grass surface will suffice, saving a lot of money.

**An overview of differences in the design of identical components of gaming elements** for standard fall height with the dampening requirements and for a fall height lowered to 1 m.

CLIMBING NET

SLIDE

## Steel

The base columns are made of structural steel of 100 x 100 mm

## General product information

### Determination of equipment

- The play system is intended for children from 3 to 14 years of age.
- All play elements are design in accordance with standard ČSN EN 1176, which sets out the conditions for the construction of children's playground equipment and the individual elements with regard to safe operation and reduction of the risk of serious injury.
- Our workout elements and sets are intended for users from 15 years of age.
- All workout elements and sets are designed in accordance with standard ČSN EN 16630 that sets out the conditions for outdoor fitness equipment for adults, which includes general safety, control, maintenance and testing method requirements.
- All elements are dimensioned with regard to long service life and resistance to vandalism.

### Bearing structure materials

- The bearing structure is normally made of glued prisms. This solution ensures the maximum possible protection against the emergence of cracks which are common for products made of eccentric prisms
- The metal structures are made of structural steel (metal profile 100×100×4 mm) which is protected against corrosion by zinc coating, resulting in a very prolonged service life of the workout elements, and coating with baked paint KOMAXIT according to the RAL colour system.
- The fasteners are designed with regard to maximum safety and durability.
- The anchors of the supporting elements are steel and protected against corrosion by hot-dip galvanising. The anchors are attached to the play element by screws and their design ensures that the wooden elements are not in direct contact with the ground.

### Play element materials

- The basic elements consist of steel pipes and profiles.
- Rope and net elements consist of ropes with multi-strand steel core with aluminium or plastic connectors.
- The seating surfaces are made of waterproof plywood or high-quality plastic (high-pressure full-coloured polyethylene), which is characterised by high colour stability, scratch resistance, UV resistance and mainly safety because it is not prone to breaking and does not pose any risk of children getting injured with sharp fragments.

### Surface finish

- The wooden parts are surface treated with deep impregnation and three-layer application of topcoat glazing varnish that meets the conditions of standard EN 71/3 (safe for children's toys).
- Metal elements are protected against corrosion by hot-dip galvanising or a zinc base and the final baked paint komaxit according to the RAL colour system

### Support and service

- All play elements are manufactured directly in the company, therefore the delivery of spare parts and the provision of warranty and post-warranty service are a matter of course.
- Certificates for play elements will be handed over to the customer upon payment of the last invoice for the work.

Since we are constantly improving and upgrading our products, some visualisations or photos of play elements and sets may not be identical to the real product at the given moment and may be slightly different. Similarly, the colour design of the products may be changed. Therefore, Bonita Group Service s.r.o. reserves the right to change both the technical design and the appearance of all the products in the catalogue.

# ANTIVANDAL Programme

These are all-metal sets and elements that can be combined in various ways. These elements and sets are manufactured of high-quality materials that guarantee maximum durability and the highest possible quality-to-price ratio, which is not the only advantage of the **ANTIVANDAL** Programme.

All-metal play elements and sets have minimal maintenance requirements, it is not necessary to re-paint them, they are rigid, stable, colour-fast and weather resistant.

The most important advantage of these sets and elements is resistance to vandalism and long service life. The individual components are rigid, very hard to damage and can withstand the maximum load without any risk of breaking or bending. Therefore, even in case of inappropriate loading by the persons, for whom the set is not intended, they are very difficult to damage.

The **ANTIVANDAL** Programme is suited for installation not only in places, where there is a risk of misuse of children's play sets by high-risk persons, but also where they can serve well to those for whom they are intended.

## **Delivery** of turnkey children's **playgrounds.**

### **Customised playground design**

We will prepare spatial visualisation of your future playground including protection zones and any impact zones for **FREE**.

### **Manufacture of elements in our company**

As one of the largest manufactures in the Czech Republic, we have the entire production process under control from A to Z and are able to flexibly respond to customer requests.

**Visualisation**  
during consultation

**Execution completed**  
upon handover of the work

# SEESAWS

Seesaws are made in a combination of wood and metal or all-metal. It is a simple playground element used not only to entertain children and to contribute to the development of strength and coordination, but mainly to develop cooperation between children and establish contact.

# CLIMBING AND BALANCING ELEMENTS

Climbing elements include mainly climbing sets and climbing walls. Climbing sets primarily support the development of fitness and strength, the ability to handle motor activity in a different, less common environment, and encourage children to perform. The individual elements develop children's fitness and coordination abilities as well spatial orientation.

This is similar with balancing elements such as the balancing beam, only with more emphasis on the development of balance, when the child surmounts his or her limits and develops volitional abilities in this playful manner (such as endurance, responsibility, self-control, independence and ambitiousness). Whether a climbing pole, a climbing wall or a cross bar is part of a climbing set or placed in the space individually, you are always contributing to the development of not only motor but also psychomotor skills of the child.

# JUNGLE GYMS

Jungle gyms are another way to colourfully revive children's playgrounds primarily thanks to their shapes and bright design combining plastic crawler tunnels, ropes and benches. They are a suitable complement to children's playgrounds that develop children's skills such as climbing, sliding down, and crawling, as well as improve orientation in an enclosed space.

# MERRY-GO-ROUNDS

The popularity of children's merry-go-rounds lies in the simplicity that warrants their good use by the children themselves. This element is not static, thus contributing more effectively to a higher degree of children's movement activity, resulting in the development of strength, volitional efforts as well as discipline and respect for others.

# SPRING ROCKERS

Spring rockers can be placed as separate play elements in the space of children's playgrounds or places that are intended for children's play and fun. The rockers are also suitable for the little ones. We offer a wide selection of children's rockers with various designs, made of high-quality material that guarantees long life. The body of these children's spring rockers is not made of waterproof plywood but of high-quality plastic (high-pressure full-coloured polyethylene), which is characterised by high colour stability, scratch resistance, UV resistance and mainly safety because it is not prone to breaking and does not pose any risk of children getting injured with sharp fragments. The springs of these rockers are made of special spring steel and are treated with the komaxit powder paint.

# ROPE PYRAMIDS

Rope pyramids are popular play elements. In a relatively small space, they contribute to the development of gross motor skills, coordination of the movement of the upper and lower extremities with necessary visual control. They help develop skills and abilities such as keeping balance, training dexterity, endurance and strength. We supply various types and sizes of rope pyramids. Their selection depends on the space available so that their placement ensures safe use.

**Rope quadruple-pyramid PY164**

Height 4 m, with 16 tension locks

# BALANCING ROPE ELEMENTS

Balancing rope elements develop skills such as climbing and crawling. They support the development of balance, coordination and power skills, orientation in space, and are intended for children from 3 years of age. Individual elements can also be combined and no impact surface is necessary for those up to 1 m in height, a grassy surface is sufficient.

# CABLEWAYS

Cableways are popular play elements which are easy to use in narrower and longer areas due to their length-to-width. Rope courses use kinetic energy when sliding, thus not requiring any increased physical effort on the part of the user. The unconventional smooth slide from the higher part of the cableway to the lower is very popular with children and represents a way of moving completely different from the use of traditional play elements (e.g. seesaws, merry-go-rounds).

**Single post cableway LD010**

**Twin post cableway LD020**

**Platform for the cableway NP001**

# SLIDES

Slides may be placed individual (with a ladder) or as parts of play sets. We offer slides in several colour designs (blue, yellow, red, green) and sizes. Slides are one of the most sought-after playground elements.

# UNIVERSAL TOWER SETS

Tower sets offer active entertainment to children while developing their basic motor skills, they can be built in all types of schools, in relaxation zones, recreational complexes, in housing developments, swimming pool complexes and family home backyards. Tower sets can be assembled according to the investor's wishes with regard to the size of the space, the age of future users etc.

We offer tower sets for playgrounds in two designs depending on the impact damping requirements of the impact surface. Sets with lower platforms have a tremendous advantage in that they do not require a costly impact surface such as pebbles (rubber), but a grass turf is sufficient.

# PLAYGROUND ACCESSORIES

If you would like to add some sets or individual elements or otherwise wanted to enrich the previously unused space in any other manner, you can do so using playground accessories that can top off the overall character of playgrounds. If chosen properly, they can develop fine motor skills faster in an unforced manner, especially when the child is learning to write, count or draw, and at the same time has the possibility to gain better ability to navigate in social relationships and roles in the form of imitation.

# STREET WORKOUT

Street workout is a good opportunity for adults and the youth who do not enjoy going to the gym and prefer to stay in the fresh air because workout parks are usually located in public areas. This type of activity is widespread throughout the world, and the number of workout parks has been also growing in the Czech Republic in recent years, thus becoming not only a trend but also part of everyday life.

Street workouts are bodyweight exercises that contribute to improving physical fitness, strength and endurance. However, they are not just about the workout itself but also about humbleness, morality, healthy lifestyle, and establishing friendships. They are based on various exercises using parallel bars, cross bars, wall bars and other structures. Street workout combines sport and entertainment, keeps the youth away from drugs, alcohol and other negative influences, which undoubtedly has a positive impact on society.
