

Rope pyramid with tower PY-831KS - silver

Product type PY-831KS-10

Basic information

| | |
|------------------------------|------------------------|
| Age category | 3 - 15 years |
| Minimum area | 12,5 m x 7,6 m |
| Equipment measurements | 9 m x 4,6 m x 2,97 m |
| Free fall height: | 1,0 m |
| Load capacity: | 3480 kg |
| Max. number of users: | 60 |
| Fall zone: EN 1177 | Grass surface |
| Designation: | exterior |
| Availability of spare parts: | supplied by the |
| Certificate of Compliance: | ČSN EN 1176 - 1, 3, 11 |

Material

Wooden parts - waterproof plywood
 Plastic parts - polyamide, HDPE
 Slide - fibreglass
 Metal parts - structural steel
 Ropes and nets - polypropylene with inner steel core

Finish

Komaxit powder coating
 Hot-dip galvanizing

Description

The supporting pole Rope pyramid is made of structural steel with a diameter of 114 mm. The column is protected against corrosion by hot-dip galvanizing and placed in a concrete bed. These structures are embedded in a concrete bed. The tower's supporting structures are made of structural steel. All other metal elements are also treated with galvanizing and fired with KOMAXIT RAL.

The ropes are made of HERKULES (16 mm polypropylene ropes with inner steel core) and are connected by plastic joints. The slide is made of fibreglass. The chute front is made of high-quality HDPE (high-pressure, full-colored polyethylene, which is characterized by high color stability, UV resistance and especially safety because it is brittle and there is no danger of injuring children with sharp chips). The platform is made of waterproof plywood or HDPE on request. All fasteners are galvanized or stainless steel.
